PUBLIC WORKS DIRECTOR REPORT

Honorary Mayor and Honorary Council,

Palisades Road Trail

City crews have built a trail out of the reclaimed asphalt from the Lisbon Road overlay project. The original plan was to use some of the reclaimed asphalt behind the ambulance building so we can access our mulch pile during the wet season. We had left over asphalt so I contacted Roger Pitlik from the School and explained to him what we would like to do. He agreed that it would be an economical option for another access point to the school from Palisades Road. He contacted the Superintendent and he was also for the trail. I contacted LL Pelling on what the cost would be to seal coat the trail. If we are able to wait until next spring when Pelling will be in town seal coating city streets we will receive a much better price to seal coat the trail. I believe that the school is willing to pay for half the seal coating.

Lisbon Road Storm Sewer Project

City crews have placed half the storm sewer on the south side of Lisbon Road. We are currently waiting on Alliant Energy to move a 2 inch gas main. Then we will be able to continue installing the rest of the storm sewer. Grading and seeding is completed for the storm sewer that is placed.

Pool Renovation

I have talked with Roto Rooter on televising the infrastructure at the pool. They recommend us waiting until the pool closes to get a better idea of where the leaks may be. I have set up Roto Rooter to come in on September 14th. We have also contacted Portzen Construction about replacement cost of the pool filters. We are waiting to hear back from them.

Parks and Ball Fields

We have begun a process of where we cut the sod out from around the fence line on the baseball fields, then will replace it with lime. Our goal in doing this is to help keep the base of the fence in place. We currently have fence starting to roll on us. By burying the bottom of the fence we are hoping to add stability. We have also buried anchors behind the backstops to help minimize the backstop from rolling as well.
